> Inventory and Warehouse Management

Business process	Process step	R*	SPC know-how
Cross Docking	<p>Matches inbound deliveries to outbound deliveries:</p> <p>a) One-step Cross Docking: Transfers goods with one transfer order from inbound to outbound.</p> <p>b) Two-step Cross Docking: Transfers goods from inbound to an interim storage type (for example, staging area, repacking zone) and creates a subsequent transfer order from the interim storage type with destination outbound deliveries.</p>	4	<p>> Good experience, Tested and customized once.</p> <p>Implemented account determination with Transaction 'OBYC'.</p> <p>Control value flow in FI/CO</p>
Warehousing and Storage	<p>Manages the stocks of a company in quantities and values. It is integrated with supply chain accounting and is responsible for goods receipts and goods issues, and for managing different stock categories (available, blocked stock, in quality assurance, and so on) and special stocks (including consignment stock, project stock, and so on). Enables a summarized visibility of stocks in the supply chain.</p>	4	<p>> Years of experience</p> <p>Special customer stock Special Project stock</p> <p>Provision Slow Mover:</p> <ul style="list-style-type: none"> Developed special program for the Provision of material <p>Implemented account determination with Transaction 'OBYC'. Control value flow in FI/CO</p>

Outbound Processing with WM

Outbound processing comprises the preparation of goods to be delivered from a warehouse to a receiving location. Outbound processing within the scope of warehouse management typically comprises activities like the notification of goods to be supplied from a warehouse to a customer for which the outbound delivery serves as the reference document, picking, packing, physical goods issue in warehouse, loading, goods issue and goods issue posting to IM, advising advanced shipping notifications to business partners and, obtaining a proof-of-delivery from the receiving business partner.

4

> Years of experience

Specially in connection with SD

Implemented account determination with Transaction 'OBYC'.

Control value flow in FI/CO

Physical Inventory on storage Level

Physical Inventory is a process that all companies with their own stocks or special stocks in their warehouse eventually face. There are several different kinds of physical inventory that can be managed, for example: periodic inventory, continuous inventory, cycle counting or inventory sampling.

3

> Good knowledge of process

Implemented account determination with Transaction 'OBYC'.

Control value flow in FI/CO

Processing Consignment Orders in ERP

Consignment processing, the vendor provides materials and stores them on your premises. The vendor remains the legal owner of the material until you withdraw materials from the consignment stores. Only then does the vendor require payment. The invoice is due at set periods of time, for example, monthly. In addition, you can also arrange with the vendor that you take over ownership of the remaining consignment material after a certain period of time. The consignment stock is managed under the same number as your own stock. Consignment stock can, therefore, be transferred to the available stock.

4

> Good knowledge of the process,

Implemented together with another Consultant.

Implemented account determination with Transaction 'OBYC'.

Control value flow in FI/CO

Also if the Sales Order is Cost Object.
